Done In progress To do

GROUP REFLECTION

1. What did you learn from the sprint simulation?

I learned how Agile Scrum can be used to organize software work through Epics, User Stories, backlog prioritization, Story Points, and sprint planning. I also learned how Jira helps in tracking the progress of each work item.

2. Was the planned work completed?

Yes. The work selected for the sprints was completed by moving the Stories through the different Jira stages and marking the required items as Done.

3. What did the Burndown Chart show?

The Burndown Chart helped us visualize the remaining Story Points during the sprint and understand how the work progressed toward completion.

4. What could be improved?

The sprint process could be improved by setting more accurate estimates, organizing the backlog more effectively, and reviewing progress regularly so that delays can be identified earlier.
